ions we've seen so far

manipulate data.

To computer we must have
the ability to make decisions.

Decisions in High-Level Languages

- Conditional Statements : `if, if-else, switch`
- Loops: `while, do while, for`
- Equality and Inequality : `<, <=, >, >=`

Branches

From if-else/switch to assembly

Conditional Statement in HLL

```
// if-else in C/Java
if (condition) clause
if (condition) {
    clause1
}
else {
    clause2
}
```

Assignment Project Exam Help

<https://eduassistpro.github.io/>

Add WeChat edu_assist_pro

```
// C: Rewrite with goto
if (condition) goto L1
                se2
                2
                se1
L2:
```

Same meaning in C

No **goto** in Java

Conditional Branches in MIPS

Branch if (registers are) equal: **beq** **reg1**, **reg2**, label

```
// C
```

```
if (reg1 == reg2)  
    goto label1 ;
```

Assignment Project Exam Help

C to MIPS

```
# MIPS:
```

```
# go to label1 if $s1 == $s2  
beq $s1 $s2 label1
```

<https://eduassistpro.github.io/>

Branch if (registers are) not equal: **bne** **reg1**, **reg2**, label

```
// C
```

```
if (reg1 != reg2)  
    goto label1 ;
```

C to MIPS

```
# MIPS
```

```
# go to label1 if $s1 != $s2  
bne $s1 $s2 label1
```

Unconditional Branch

- **Jump Instruction:** Jump directly to a label

Add WeChat edu_assist_pro

Technically, the following instruction is the same.

There is an important difference. We will see in MIPS representation!

```
# beq version
beq $0, $0, label
```

Conditional Statement in HLL

```
// C and Java  
if ( i == j ) {  
    f = g + h ;  
} else {  
    f = g - h ;  
}
```

Assignment Project Exam Help

<https://eduassistpro.github.io/>

Add WeChat edu_assist_pro

Compiling *if-else* into MIPS

```
// C and Java
if ( i == j ) {
    f = g + h ;
} else {
    f = g - h ;
}
```

compiler automatically creates labels to handle decisions (branches).

Registers

\$s0	f
\$s1	g
\$s2	h
\$s3	i
\$s4	j

MIPS

```
beq $s3 $s4 True      # branch i == j
sub $s0, $s1, $s2     # f = g - h (false)
j Exit                # jump to Exit
True: add $s0, $s1, $s2 # f = g + h (true)
Exit:
```

The Switch Statement in HLL

Choose among four alternatives
depending on whether *k* has
the value 0, 1, 2 or 3.

```
// Rewrite it with if-else
if      (k==0)  f = i + j ;
else if (k==1)  f = g + h ;
else if (k==2)  f = g - h ;
else if (k==3)  f = i - j ;
```

```
// Switch Statement
switch (k) {
    case 0: f=i+j; break ;
    case 1: f=g+h; break ;
    case 2: f=g-h; break ;
    case 3: f=i-j; break ;
}
```

Loops

Assignment Project Exam Help

<https://eduassistpro.github.io/>

Add WeChat edu_assist_pro

Q: How did the programmer die
wer?

A the shampoo bottle
: Lather. Rinse.

Repeat.

Loops in C and Assembly

HLL has three types of loops: while, do-while, for
can be rewritten as assembly

Assignment Project Exam Help
<https://eduassistpro.github.io/>
Add WeChat edu_assist_pro

MIPS: There are multiple ways to write a loop with conditional branch

Loops in HHL: 3 ways

Example: Sum of Series

$\text{sum} = 1 + 2 + 3 + 4 + 5$

```
// while
int i = 1 ;
int N = 5 ;
int sum = 0 ;

while ( i <= N ) {
    sum += i ;
    i++ ;
}
```

Assignment Project Exam Help

```
// for
int i = 1 ;
int N = 5 ;
int sum = 0 ;

for (i=1 ; i <= N ; i++)
    sum += i ;
```

<https://eduassistpro.github.io/>

Add WeChat: edu_assist_pro

```
// do-while
int i = 1 ;
int N = 5 ;
int sum = 0 ;

do {
    sum += i ;
    i++ ;
} while (i <= N) ;
```

From do-while to goto

Example: Sum of Series

sum = 1 + 2 + 3 + 4 + 5

```
int i = 1 ;  
int N = 5 ;  
int sum = 0 ;  
// do-while loop in C  
do {  
    sum = sum + i ;  
    i = i + 1 ;  
} while ( i != N ) ;
```

Assignment Project Exam Help

<https://eduassistpro.github.io/>

Add WeChat [edu_assist_pro](#)

do-while to goto

```
int i = 1 ;  
int N = 5 ;  
    um = 0 ;  
  
Loop: sum = sum + i ;  
        i = i + 1 ;  
if ( i != N )  
    goto Loop ;
```

From do-while to MIPS assembly

// do-while loop in C

```
do {  
    sum = sum + i ;  
    i = i + 1 ;  
} while ( i != N )
```

// Rewrite it with goto in C

```
Loop: sum = sum + i ;  
      i = i + 1 ;  
      ( i != N )  
      goto Loop ;
```

Assignment Project Exam Help

<https://eduassistpro.github.io/>

Add WeChat edu_assist_pro

Registers

\$s1	i
\$s2	N
\$s3	sum

MIPS code

```
Loop: add  $s3, $s3, $s1  # sum = sum + i  
      addi $s1, $s1, 1    # i = i + 1  
      bne  $s1, $s2, Loop # go to Loop if i != N
```

Assignment Project Exam Help

<https://eduassistpro.github.io/>

Add WeChat edu_assist_pro

Inequalities

So far, we only test equalities. What about inequalities?

Inequalities in MIPS

- `beq` and `bne` only tested equalities

```
if ( i == j )  
if ( i != j )
```

Assignment Project Exam Help

C to MIPS

```
beq $s1, $s2, label1  
bne $s1, $s2, label1
```

<https://eduassistpro.github.io/>

Add WeChat edu_assist_pro

- We need to test `<`, `<=`, `>`, `>=`

```
if ( i < j )  
if ( i <= j )  
if ( i > j )  
if ( i >= j )
```

C to MIPS

Inequalities in MIPS: `slt`

- Syntax:

`slt reg1, reg2, reg3`

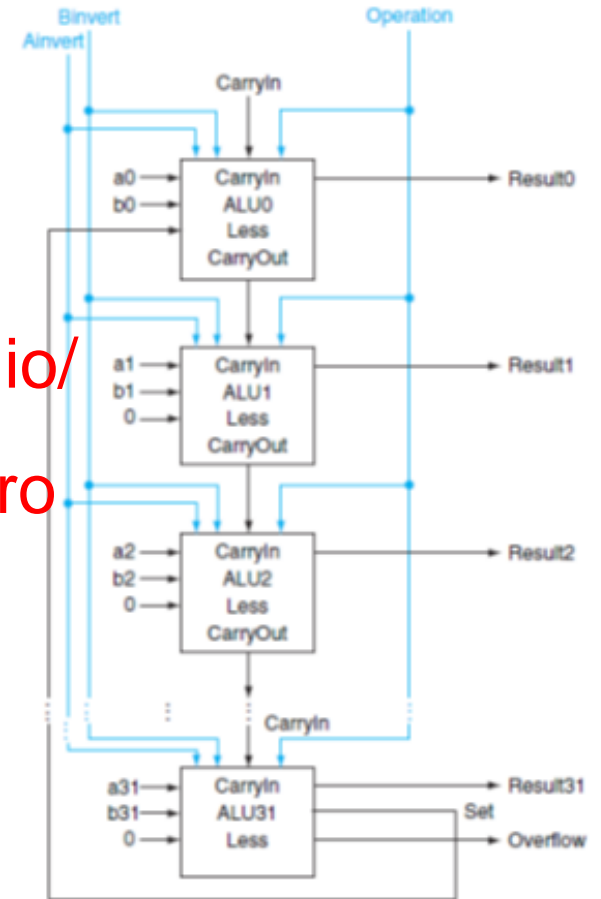

- Compare `reg2` a
- Place the resu

```
// HLL style
if ( reg2 < reg3 )
    reg1 = 1 ;
else
    reg1 = 0 ;
```

Assignment Project Exam Help

<https://eduassistpro.github.io/>

Add WeChat edu_assist_pro

Remember “**S**et on **L**ess **T**han” From ALU?

Inequalities in MIPS: from *goto* to MIPS

```
// C
if ( g < h )
    goto Less ;
```

Assignment Project Exam Help

<https://eduassistpro.github.io/>

Registers

\$s0	g
\$s1	h
\$t0	

Add WeChat edu_assist_pro

```
# MIPS: branch to Less if $s0 < $s1
slt $t0, $s0, $s1 # if $s0 < $s1 (g < h), $t0 = 1
bne $t0, $0, Less # branch if $t0 != 0
```

\$0 always contains 0

`bne` and `beq` often use it for comparison after an `slt` instruction.

Inequalities in MIPS

We have now seen `slt` for `<`, what
about `>`, `<=` and `>=`

Assignment Project Exam Help

<https://eduassistpro.github.io/>

Add WeChat `edu_assist_pro`

MIPS philosophy: **Simpler is Better!** Can we implement them using just `slt` and `beq/bne`

Four Combinations of `slt` and `beq/bne`

```
slt $t0, $s0, $s1    # $t0 = 1 if $s0 < $s1 (g < h)
bne $t0, $0, Less     # if $t0 != 0, goto Less ( g < h )
```

Assignment Project Exam Help

```
slt $t0, $s0, $s1    # $s1 (g < h)
beq $t0, $0, Geq      # if $t0 == 0, goto Geq ( g >= h )
```

<https://eduassistpro.github.io/>

Add WeChat edu_assist_pro

```
slt $t0, $s1, $s0    # $t0 = 1 if $s1 < $s0 (h > g)
bne $t0, $0, Gtr      # if $t0 != 0 goto Gtr ( g > h )
```

```
slt $t0, $s1, $s0    # $t0 = 1 if $s1 < $s0 (g > h)
beq $t0, $0, Leq      # if $t0 == 0, goto Leq ( g <= h )
```

Pseudo-instructions for Inequalities

Too complicated? Good News!

MARS translates pseudo-instructions into MIPS instructions

Inequalities with

<https://eduassistpro.github.io/>

Add WeChat edu_assist_pro

Immediates in Inequalities

- **Syntax:**

slti **Result** **Source** **Immediate**

Assignment Project Exam Help

- Result = 1 if Source < Immediate, 0 otherwise

- **slti** is the immediate comparison instruction

<https://eduassistpro.github.io/>

Add WeChat edu_assist_pro

```
// C
if ( g >= 1 )
    goto Loop ;
```

```
# MIPS
slti $t0, $s0, 1      # $t0 = 1 if $s0 < 1
beq  $t0, $0, Loop    # goto Loop if $t0 == 0
```

Unsigned Immediates in Inequalities

- Syntax:

`sltu` **Result** **Source1** **Source2**
`sltui` **Result**

- Set result to 1 or 0

<https://eduassistpro.github.io/>
ned comparisons
Add WeChat edu_assist_pro

```
# MIPS
slti   $t0, $s0, $s1    # $t0 = 1 if $s0 < $s1
sltui  $t0, $s0, 5      # $t0 = 1 if $s0 < 5
```

Immediates in Inequalities

```
slt    $t0, $s0, $s1  
sltu   $t1, $s0, $s1
```
